

Goto> Jenkins Dashboard>Manage Jenkins>

The screenshot shows the Jenkins 'Manage Jenkins' page. On the left is a sidebar with navigation links: 'New Item', 'Build History', 'Project Relationship', 'Check File Fingerprint', 'Manage Jenkins' (highlighted), and 'My Views'. Below these are two status boxes: 'Build Queue' (No builds in the queue) and 'Build Executor Status' (0 of 2 executors busy). The main content area is titled 'Manage Jenkins' and includes a search bar. It features two warning banners: an orange one about job organization and a red one about a security warning in the 'Credentials Binding Plugin'. Below the warnings is a 'System Configuration' section with icons for 'System', 'Tools', and 'Plugins' (which has a red '46' badge). A blue bar at the bottom contains the text 'localhost:8080/manage'.

Click on Plugins>

This screenshot shows the 'Plugins' page within the Jenkins 'Manage Jenkins' section. The 'Plugins' tile is highlighted with a red rectangle. It displays a red badge with the number '46' and the text 'Add, remove, disable or enable plugins that can extend the functionality of Jenkins.' Below this, other configuration tiles are visible, including 'System', 'Tools', 'Nodes', 'Docker', 'Clouds', and 'Appearance'. At the bottom of the page, a 'Security' section is partially visible. A Windows taskbar at the very bottom shows a screen sharing notification: 'You are screen sharing' with a 'Stop share' button. The address bar at the top indicates the URL 'localhost:8080/manage/pluginManager'.
